SUMMER 2023

SUMMERTIME FUN

If you have vacation plans this summer, please be sure to contact us ahead of time so we can add a travel notice to your debit card!

How to Use the EnergyGuide Label to Shop for Home Appliances

The less energy an appliance like a refrigerator or dishwasher uses, the less it costs to run — which means more money in your pocket each year. The EnergyGuide label is the yellow tag you'll find attached to most home appliances, and it tells you how much energy that appliance uses. Here's what to know about using the EnergyGuide label when you shop.

EnergyGuide FAQs

How do I use the EnergyGuide label?

The EnergyGuide label lets you know how much energy an appliance uses and see how it compares to the energy use of similar appliances.

What if I don't see an EnergyGuide label on an appliance?

Look inside the appliance — the label might be there. Or check the seller's or manufacturer's websites.

What is the ENERGY STAR program?

The ENERGY STAR program encourages the use of energy-efficient products that protect the environment and save money. The ENERGY STAR label helps you identify high-efficiency models. To qualify for the ENERGY STAR, a product must meet energy efficiency guidelines set by the U.S. Environmental Protection Agency (EPA). Learn more at energystar.gov.

Is there anything else I should do or look for when I'm shopping for an appliance?

Measure. You need a space that's large enough for the appliance, lets you open the appliance door or lid fully, and has enough clearance for safe ventilation.

Read reviews. Product reviews from experts can be helpful when you're looking at appliances. Reviews can tell you things like how noisy they are, how much water they use, and how likely it is they'll need repairs. Customers' online reviews also can help you spot common complaints.
